Scheda Controllo

The "Control" tab with its 3 sections is shown below :

Keyboard

The first section "Keyboard" provides two options :

Wait for key press …. - Selecting this option enables a show to be controlled manually and applies to the whole show. An alternative method is to use the settings in "Slide Options/Main", but note that this applies to individual slides only. Note also that this option works whether the second option is selected or not. Permit control of show using keyboard - This second option is provided to enable the user to override the default time of individual slides. For example the slide duration may be 10s. By selecting this option the next slide in the Slide line can be made to appear before the 10s has elapsed. For many shows, it is likely that a user would leave these two options un-selected.

Mouse

The second section deals with mouse actions. These settings are independent of the "Keyboard" settings.

Various alternative actions are available. Most of these should be self-explanatory. The "mouse wheel for rewinding" allows the show to be re-wound when in the play mode.

Navigation Bar

The last section controls operation of the "Navigation Bar".If "Show Navigation Bar" is selected, an additional dialog box shown below opens when the "Customize" button is clicked and a navigation bar opens on screen during playback. This enables the user to perform various operations as specified in the customize dialog box. Note that the show needs to be set to "wait for keypress…" or individual slides set to "wait for keypress to show next slide", if a manually operated slide show is required.
