

# Creare una diapositiva menu

....o una diapositiva con collegamenti ad applicazioni esterne.

Ogni oggetto in una diapositiva può essere usato per collegarlo a una applicazione esterna o a una presentazione.

Per creare il collegamento si usa la seguente procedura.

In Oggetti e animazioni / scheda Comune:

- Si evidenzia l'oggetto da usare per il collegamento facendo clic su di esso nel pannello Oggetti
- Nella scheda Comune si fa clic su "Azione al clic del mouse"
- Dal menu a discesa si seleziona l'azione necessaria più appropriata
  - Avvia presentazioneAvvia presentazione e ritorna
  - Esegui applicazione o apri file
  - Esegui applicazione ed esci

*E' da notare che l'oggetto scelto per il collegamento deve essere "in cima" a ogni altro oggetto nella diapositiva. SE l'oggetto con il collegamento è ricoperto da altri oggetti come una Cornice o un Rettangolo trasparente in questo caso l'oggetto sovrastante deve avere l'opzione "Trasparente sulla selezione" abilitata per permettere al cursore del mouse di "vederlo".*

The illustration below shows the Objects and Animation (O&A) screen for a slide which has two Hyperlinks to external shows (EXE Files etc). Hyperlinks can be "attached" to either Images or Text. In O&A click on an image or text and it will be highlighted in the Objects Panel. Click on "Action on (Left) Mouse Click" and the Options are shown. In this case the setting of "Run Slideshow with return is shown which is ideal for Slideshows made in the same version of Picturestoex and the show containing the Hyperlinks. Immediately below, you can browse for the show (exe) that you want to link to.

When the show is Saved and Published as an EXE (or when it is run in Preview) Left Clicking on the Hyperlinked Object (Image or Text) will initiate the chosen (external) show. When the external show is completed you will be returned to the original slide in the original show to continue with your presentation.

Note that a slide containing Hyperlinks should (normally) be set to "Wait for key press to show next slide".

## Run Slideshow

- Will run a slideshow made with the same version of Picturestoexe and exit. If you attempt to link to an EXE made in a previous/newer Version of Picturestoexe then a warning message is shown with instructions on how to proceed

## Run Slideshow with return

- Will run a slideshow made with the same version of Picturestoexe and return to the slide containing the Hyperlink. If you attempt to link to an EXE made in a previous/newer Version of Picturestoexe then a warning message is shown with instructions on how to proceed

## Run Application or open file

- Will open a Slideshow or another Application such as Adobe Photoshop, Microsoft Word etc. Alternatively point the link to a JPEG or Word Document and, if the default opening program for those files is Photoshop or Word, the file will open in the corresponding application. In the OPEN window select "all files" from the dropdown menu to select JPEGs or Word documents etc. When the selected File/Application is closed you are returned to the slide containing the Hyperlink

## Run application and exit

- Will open a Slideshow or another Application such as Adobe Photoshop, Microsoft Word etc. Alternatively point the link to a JPEG or Word Document and, if the default opening program for those files is Photoshop or Word, the file will open in the corresponding application. In the OPEN window select "all files" from the dropdown menu to select JPEGs or Word documents etc. When the selected File/Application is closed you are returned to the desktop
